

A circular phylogenetic tree illustrating the evolutionary relationships between numerous bacterial strains. The tree is organized into several distinct clusters or clades, each identified by a label such as "E. coli O157:H7", "Salmonella enterica serovar Enteritidis", "Listeria monocytogenes", etc. The branches are color-coded according to a legend in the top right corner: grey circles indicate 0 copies of a particular marker, while white circles indicate 1 copy. The overall structure shows a complex web of genetic relatedness among the different isolates.
